Professional Summary

Motivated MCA student specializing in Artificial Intelligence and Machine Learning. Possesses proven experience as a Python Django Full-Stack Developer Intern. Adept at building full-stack web applications, seamlessly aligning with the requirement to design and develop robust digital platforms and digital marketing tools. Ready to apply a strong Problem-Solving Approach and Leadership to assist in strategy preparation, onboarding academia, and establishing Quality Clubs.

Technical Skills

- DS/ML/DL = Data Science, Machine Learning, Natural Language processing, Data analysis, Statistics, Linear Algebra .
- Framework/Modules = NumPy, Pandas, Seaborn, Matplotlib, Scikit-Learn, Keras, TensorFlow.
- MLOps Tools = Git, Github.
- Programming and DB languages = Python, SQL, Database Management System, JAVA.
- Frameworks and Tools = Mysql, Jupyter Notebook, Colab, Flask, Django.
- Microsoft Office Tools = Excel, Power Point, Word, etc.

Skills

- Problem Solving Approach.
- Leadership.
- Team-Player.

Education

MCA - Artificial Intelligence and Machine Learning.
Jain (Deemed-to-be University), Bengaluru, Karnataka.

AUG 2025 - Present

Courses / Certification

- Complete Data Science, Machine Learning, Deep Learning & NLP Bootcamp: Ongoing – Udemy.
- Fundamentals to Become a Machine Learning Engineer: Ongoing – LinkedIn Learning.
- Programming Generative AI: From Variational Autoencoders to Stable Diffusion with PyTorch and Hugging Face: Certified – LinkedIn Learning.

Experience

Python Django Full-Stack Developer Intern — Luminar Technolab

JULY 2024 – FEB 2025

Key Responsibilities & Achievements:

- Developed full-stack web applications using Python, Django, and React.js.
- Built and integrate REST APIs using Django REST Framework.
- Designed responsive frontend interfaces using React.
- Implemented authentication and API-based data communication.
- Worked on real-world project development and deployment workflows.

Artificial Intelligence Intern — Codtech IT Solutions

JUN 2026 – AUG 2026

Key Responsibilities & Achievements:

- Constructed and deployed Machine Learning and Deep Learning models by utilizing Python and popular AI library packages.
- Completed four AI/ML projects in total, which include Plant Disease Detection, Safety Helmet Detection utilizing YOLOv8, Sentiment Analysis of Reviews, and Credit Card Fraud Detection.
- Conducted data preparation, feature generation, training of the model, and evaluation for increased accuracy and effectiveness.
- Created computer vision and predictive analytics models through the use of popular frameworks like Scikit-Learn, Pandas, NumPy, and YOLOv8.
- Kept project documentation and Github repository up to date while working on end-to-end AI projects.

Research Author — Springer Conference Accepted Paper

Paper: VDHM: An Offline-First Mesh-Based Telemedicine Framework for Rural Healthcare Access in India

Key Responsibilities & Achievements:

- Conducted research on decentralized telemedicine through design of Village Digital Health Mesh (VDHM) telemedicine system in low connectivity regions.
- Proposed communication architecture for healthcare data transfer using Bluetooth, WiFi Direct and LoRa mesh technology without reliance on cellular network connection.
- Created an Edge AI-driven clinical triage system that can classify patients according to various severity levels for use in emergency operations processes.
- Created a secure healthcare network with features such as data storage at the local level, encryption, access control based on roles, and store-and-forward medical consultations..
- Wrote a research paper, which has been selected for the Springer Conference that will be held from 6th to 7th August 2026.

Projects

[InterviewIQ – AI-Powered Multimodal Interview Coaching Platform\(Currently WorkingOn\).](#)

- Created an intelligent AI-driven full-stack interview coaching platform to help candidates prepare for interviews in real time using feedback mechanisms.
- Deployed a voice-powered interview studio driven by Groq Generative AI LLMs and WebSockets, together with an asynchronous ML pipeline for multimodal video, speech, facial emotions, and eye gaze analysis.
- Built an automated feedback system to measure candidate performance based on communication skills, confidence, technical precision, and STAR format compliance.
- Technologies Used: Python, Django, Django REST Framework, Django Channels (WebSockets), Next.js, React.js, TypeScript, Tailwind CSS, Generative AI - GROQ API, Celery, Redis, PostgreSQL, Docker.5tr4r4r54r5trt5

[AI-Integrated Telemedicine System for Rural Healthcare Enhancement.](#)

Full-Stack Multi-Role Architecture:

- Multi-purpose health care web app developed by using Django REST Framework (DRF) along with React.js that includes SimpleJWT auth as well as Role-Based Access Control (RBAC) for Patient, Doctor, Pharmacist, and Lab Technician dashboards.

Real-Time Video Consultations & AI Copilot:

- Low-latency audio/video WebRTC calls with Django Channels & Daphne WebSockets as well as AI Copilot for live transcription, language recognition and real-time clinical advice.

Privacy-First Local Generative AI & RAG Engine:

- Developed a local AI copilot using Ollama (Llama 3) + Faiss vector database in order to provide RAG-powered diagnostic help as well as OCR via Tesseract for the physical prescriptions photos.

Offline-First PWA & Background Sync:

- Affordable offline-first Progressive Web App (PWA) using Service Workers, IndexedDB and Background Sync API that records medication log offline without internet access and syncs automatically once online.

Asynchronous Task Processing & Predictive Reminders:

- Celery & Redis used for background tasks such as emails reminders, AES-GCM-256 end-to-end encryption for secure chatting, PDF prescription creation as well as sending lab reports.

[Learn Nova – E-Learning Web Application.](#)

- Developed a full-stack e-learning web application with dynamic student dashboards, course management, and progress tracking features.
- Aimed to create an interactive and secure digital learning environment through RESTful API integration and responsive UI design.
- Technologies Used: – React.js, CSS, Python (REST API), SQLite.
